

SET 11 – PRODUCT CATEGORY ANALYSIS

DSA0601 – DATA HANDLING AND VISUALIZATION

Student Name	N. Harshith
Register Number	192325078
Department	Artificial Intelligence and Machine Learning (AIML)
Course	Data Handling and Visualization
Set	11

Dataset: Product Categories

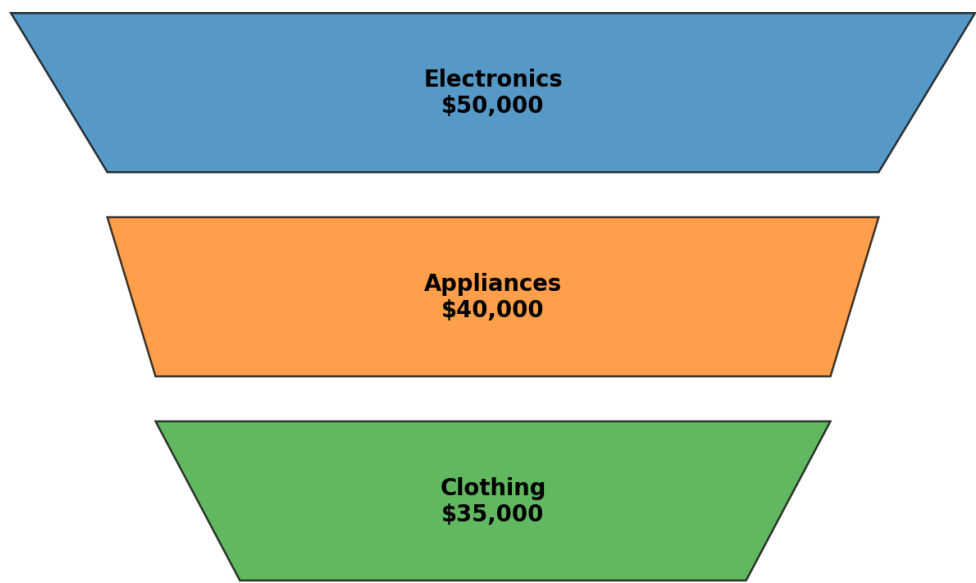

Category	Sales (in \$)
Electronics	\$50,000
Clothing	\$35,000
Appliances	\$40,000

Objectives

- Generate a funnel chart to compare sales across the supplied product categories.
- Build a table displaying sales for each product category.
- Develop a Tableau-style dashboard combining the pie chart, funnel chart and table.
- Create a pie chart representing the distribution of sales across product categories.

PROGRAM 1 – PRODUCT CATEGORY SALES FUNNEL

Product Category Sales Funnel

Stages represent the supplied product categories; width represents sales.

Result: Electronics has the highest sales (\$50,000), followed by Appliances (\$40,000) and Clothing (\$35,000). The funnel width represents the supplied sales values.

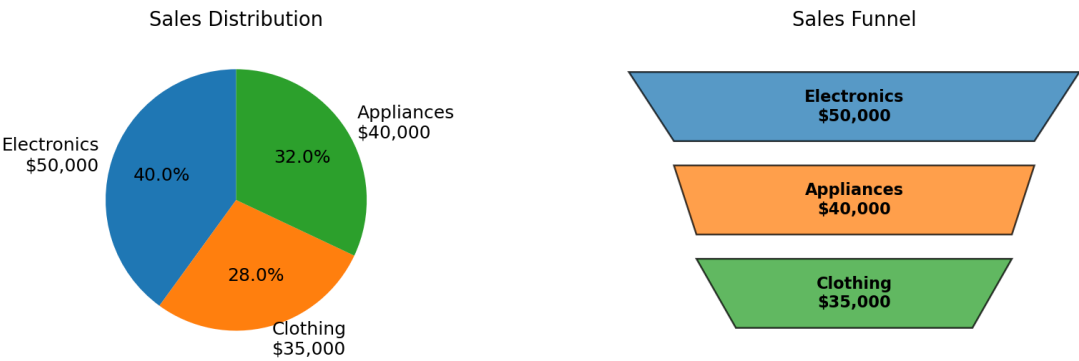

Note: The dataset contains product-category sales rather than separate conversion stages, so the funnel uses the three supplied categories as labeled stages without inventing additional conversion data.

PROGRAM 2 – SALES DATA TABLE

Category	Sales (in \$)
Electronics	\$50,000
Clothing	\$35,000
Appliances	\$40,000

PROGRAM 3 – TABLEAU DASHBOARD

Product Category Analysis Dashboard

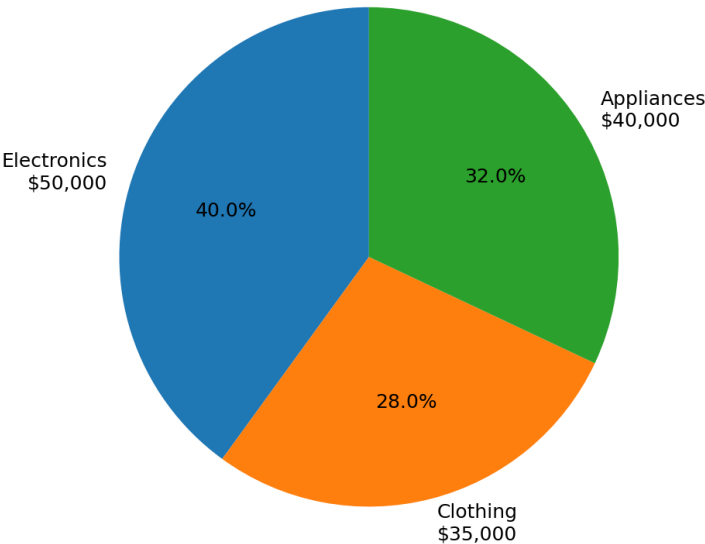

Category	Sales (in \$)
Electronics	\$50,000
Clothing	\$35,000
Appliances	\$40,000
Total	\$125,000

Illustrative Tableau-style dashboard based on the supplied dataset

Illustrative Tableau-style dashboard combining the required pie chart, funnel chart and table for interactive exploration.

PROGRAM 4 – PIE CHART: SALES DISTRIBUTION

Sales Distribution by Product Category

RESULT AND ANALYSIS

- Total sales = \$125,000.
- Electronics contributes \$50,000 (40.0%) of total sales.
- Appliances contributes \$40,000 (32.0%) of total sales.
- Clothing contributes \$35,000 (28.0%) of total sales.
- Electronics is the highest-selling category, while Clothing is the lowest-selling category.

Conclusion

The Product Categories dataset was successfully analyzed using a sales funnel, tabular representation and pie chart. The combined dashboard provides a compact view of category-wise sales and makes the relative contribution of each category easy to compare.
